Currency guidelines

Below are guidelines based on currency, regarding the formatting of account numbers, in addition to any other necessary information required by Convera and/or the beneficiary institution that may be mandatory to effect payments to the intended beneficiary.

This guide provides a framework for validating that mandatory requirements are satisfied prior to processing.

If additional information is necessary to transfer certain currencies into certain geographical areas, it will be indicated in the Guide for Specific Country Requirements or the Best Practice Guide.

When applicable, Low Value Payment guidelines will be provided under the designated currencies: AUD, CAD, EUR, GBP, HKD, NOK, NZD, SGD and USD.

Maximizing the use of this document

When using this document, it is important to verify currency requirements when sending a foreign currency wire to the specified beneficiary bank country. By doing so Convera will be able to continue to seamlessly process all payments while minimizing any requests for additional payment processing information.

Please be aware that sending exotics cross-border you may increase the potential risk of rejects/return of funds and thus generate an FX loss.

BBAN/Basic Bank Account Number

The Basic Bank Account Number (BBAN) is an identifier that uniquely distinguishes an individual account, at a specific financial institution, in a particular country. The BBAN includes a bank identifier of the financial institution servicing that account. The BBAN is implemented by each national banking community and is comprised of the domestic account number, branch details and routing information. The BBAN serves as the core of the IBAN. Account number validations identified in this document, may not apply to clearly defined foreign currency account which state the currency, for example 2147891**SGD**10.

IBAN/International Bank Account Number

The International Bank Account Number (IBAN) is an international standard for identifying bank accounts across national borders.

The IBAN was originally developed to facilitate payments within the European Union but the format is flexible enough to be applied globally. IBAN imposes a flexible but regular format for account identification and contains validation information to avoid errors of transcription.

The IBAN's primary purpose is to facilitate cross-border inter-bank routing and avoid routing errors.

The IBAN consists of a 2 digit country code, followed by two check digits and up to thirty alphanumeric characters for the domestic bank account number, called the BBAN (Basic Bank Account Number). It is up to each country's national banking community to decide on the length of the BBAN for accounts in that country, but its length must be fixed for any given country. Further specifics regarding different country IBAN lengths and characteristics are detailed below.

When a country has an established IBAN, Convera recommends using the IBAN for payments into these countries regardless of the currency.

SWIFT/BIC code

ISO 9362 (also known as SWIFT-BIC, BIC code, SWIFT ID or SWIFT code) is a standard format of Bank Identifier Codes approved by the International Organization for Standardization (ISO). It is the unique identification code of a particular bank. These codes are used when transferring money between banks, particularly for international wire transfers.

The **SWIFT** code is 8 or 11 characters, made up of:

- **4 characters** – bank code (only letters)
- **2 characters** – ISO 3166-1 alpha-2 country code (only letters)
- **2 characters** – location code (letters and digits) (if the second character is 'I', then it denotes a passive participant in the SWIFT network)
- **3 characters** – branch code, optional ('XXX' for primary office) (letters and digits)

Where an 8-digit code is given, it may be assumed that it refers to the primary office.

Bank Code

A **Bank Code** is a code assigned by a Central Bank, a Bank Supervisory Body or a Bankers Association in a country assigned to all its licensed member banks. The rules vary to great extent between the countries. Also the name of such a code varies.

EXAMPLES:

- **United States** – Routing Number or ABA Number
- **Canada** – Transit Number
- **United Kingdom** – Sort Code
- **Australia/New Zealand** – BSB Code (Bank State Branch)
- **India** – Indian Financial System Code (IFSC)
- **Hong Kong** – Hong Kong Branch Code
- **Singapore** – Singapore Branch Code
- **South Africa** – Routing Code

The bank code typically appears on the bottom of negotiable instruments such as checks identifying the financial institution on which it was drawn.

Non-SWIFT BIC

Non-SWIFT BICs, also known as non-connected BICs, are Business Identifier Codes that are not connected to the SWIFT network, and in most instances are not able to be paid directly, with the exception of EUR SEPA payments, when applicable. In the event that a payment is remitted to an institution which has one of these BICs, an override SWIFT or correspondent instructions may need to be provided (an override SWIFT/BIC is an active SWIFT/BIC for an institution that accepts payments on behalf of the Non-SWIFT BIC through the SWIFT network).

For non-SEPA payments, users should use the non-SWIFT BIC in the Beneficiary Bank SWIFT Address field and input the override SWIFT in the Intermediary Bank SWIFT Address field.

For SEPA payments, verification is necessary to determine that the SWIFT/BIC is SEPA eligible through contacting a Convera Representative or through accessing the list of [SEPA Credit Transfer participants](#).

Beneficiary address

Further to the introduction of the Information Accompanying Transfer of Funds Regulation EU 2015/847 (IATFR) we now strongly recommend beneficiary address details are included in all payments to Europe or involving European currencies.

Beneficiary address requests should be a physical address, PO Boxes are not recommended.

Effective June 1st, 2021, FINTRAC, (Canada's regulatory body), has amended their Anti-Money Laundering regulations to align requirements with international standards.

Canadian clients:

All outgoing electronic payments, no matter the destination, require full beneficiary and beneficiary bank addresses.

For beneficiaries and banks in the US, Mexico and Canada, this means street address (no PO Boxes), city, state/province, postal code and country.

Beneficiaries and banks in all other countries require minimum of street address, city and country.

Non-Canadian clients:

All outgoing electronic payments to a beneficiary bank in Canada require full beneficiary and beneficiary bank addresses.

For beneficiaries in the US, Mexico and Canada, this means street address (no PO Boxes), city, state/province, postal code and country. The same applies to beneficiary bank address.

Beneficiaries in all other countries require minimum of street address, city and country.

Additional requirements

When a beneficiary phone number, contact name at the beneficiary organization, or purpose of payment are required, this information should always be placed in the appropriate reference fields.

Purpose of Payments should be a brief succinct description of the payment; an invoice number or reference may not satisfy this requirement. Non Trade is not acceptable. (Except for JPY and THB currencies)

The beneficiary may be required to contact their banking institution and fill out the necessary paperwork, to expedite receipt of the following funds: **COP, PKR, XPF and ZAR**.

IBAN & SWIFT/BIC code

IBAN & SWIFT/BICs are required for all EUR payments within the European Monetary Union Countries and the European Economic Area (EEA) Countries. Additionally, some other countries have adopted the IBAN; it is highly recommended or mandatory when sending any payments to these countries that you ask for an IBAN in order to minimize any potential processing delays or incur additional charges.
